

1.

### Ovarian stimulation

From the 2nd day of your period, the hormonal treatment is started (10-12 days) as well as the monitoring ultra-sound scans

2.

### Egg retrieval

Oocytes are obtained through a vaginal extraction.

2.1

### Sperm

The best spermatozoon of the sample (of your partner or of the donor) are chosen.

3.

### Fertilization

Each spermatozoon is microinjected (ICSI) in each oocyte.

4.

### Embryo culture

Embryos are kept in our incubators until the blastocyste stage.

5.

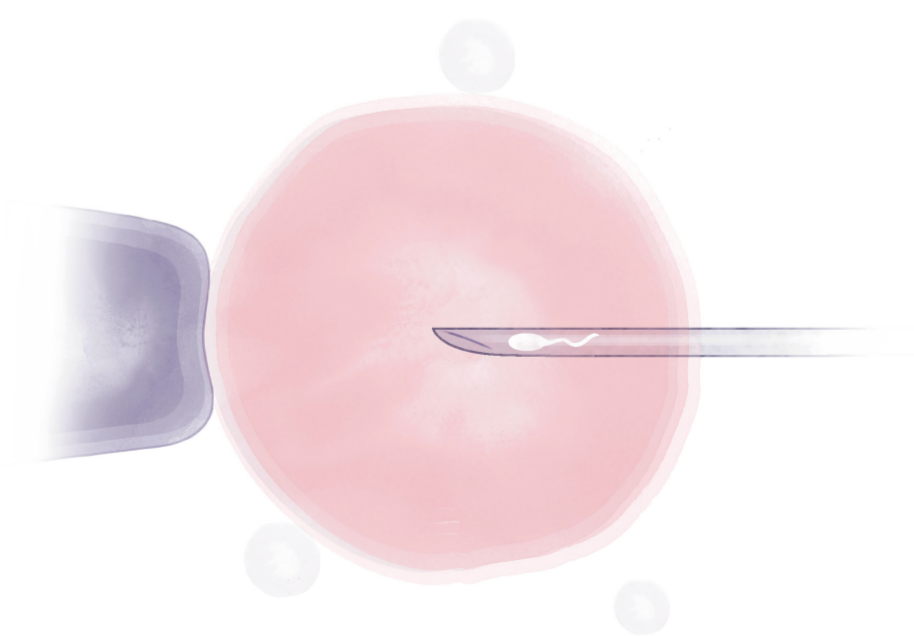

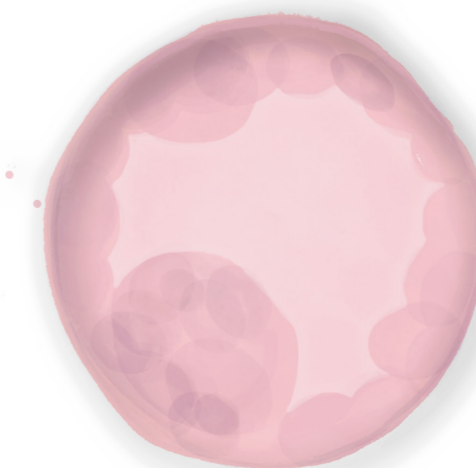

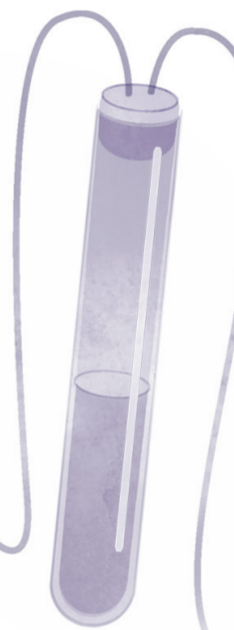

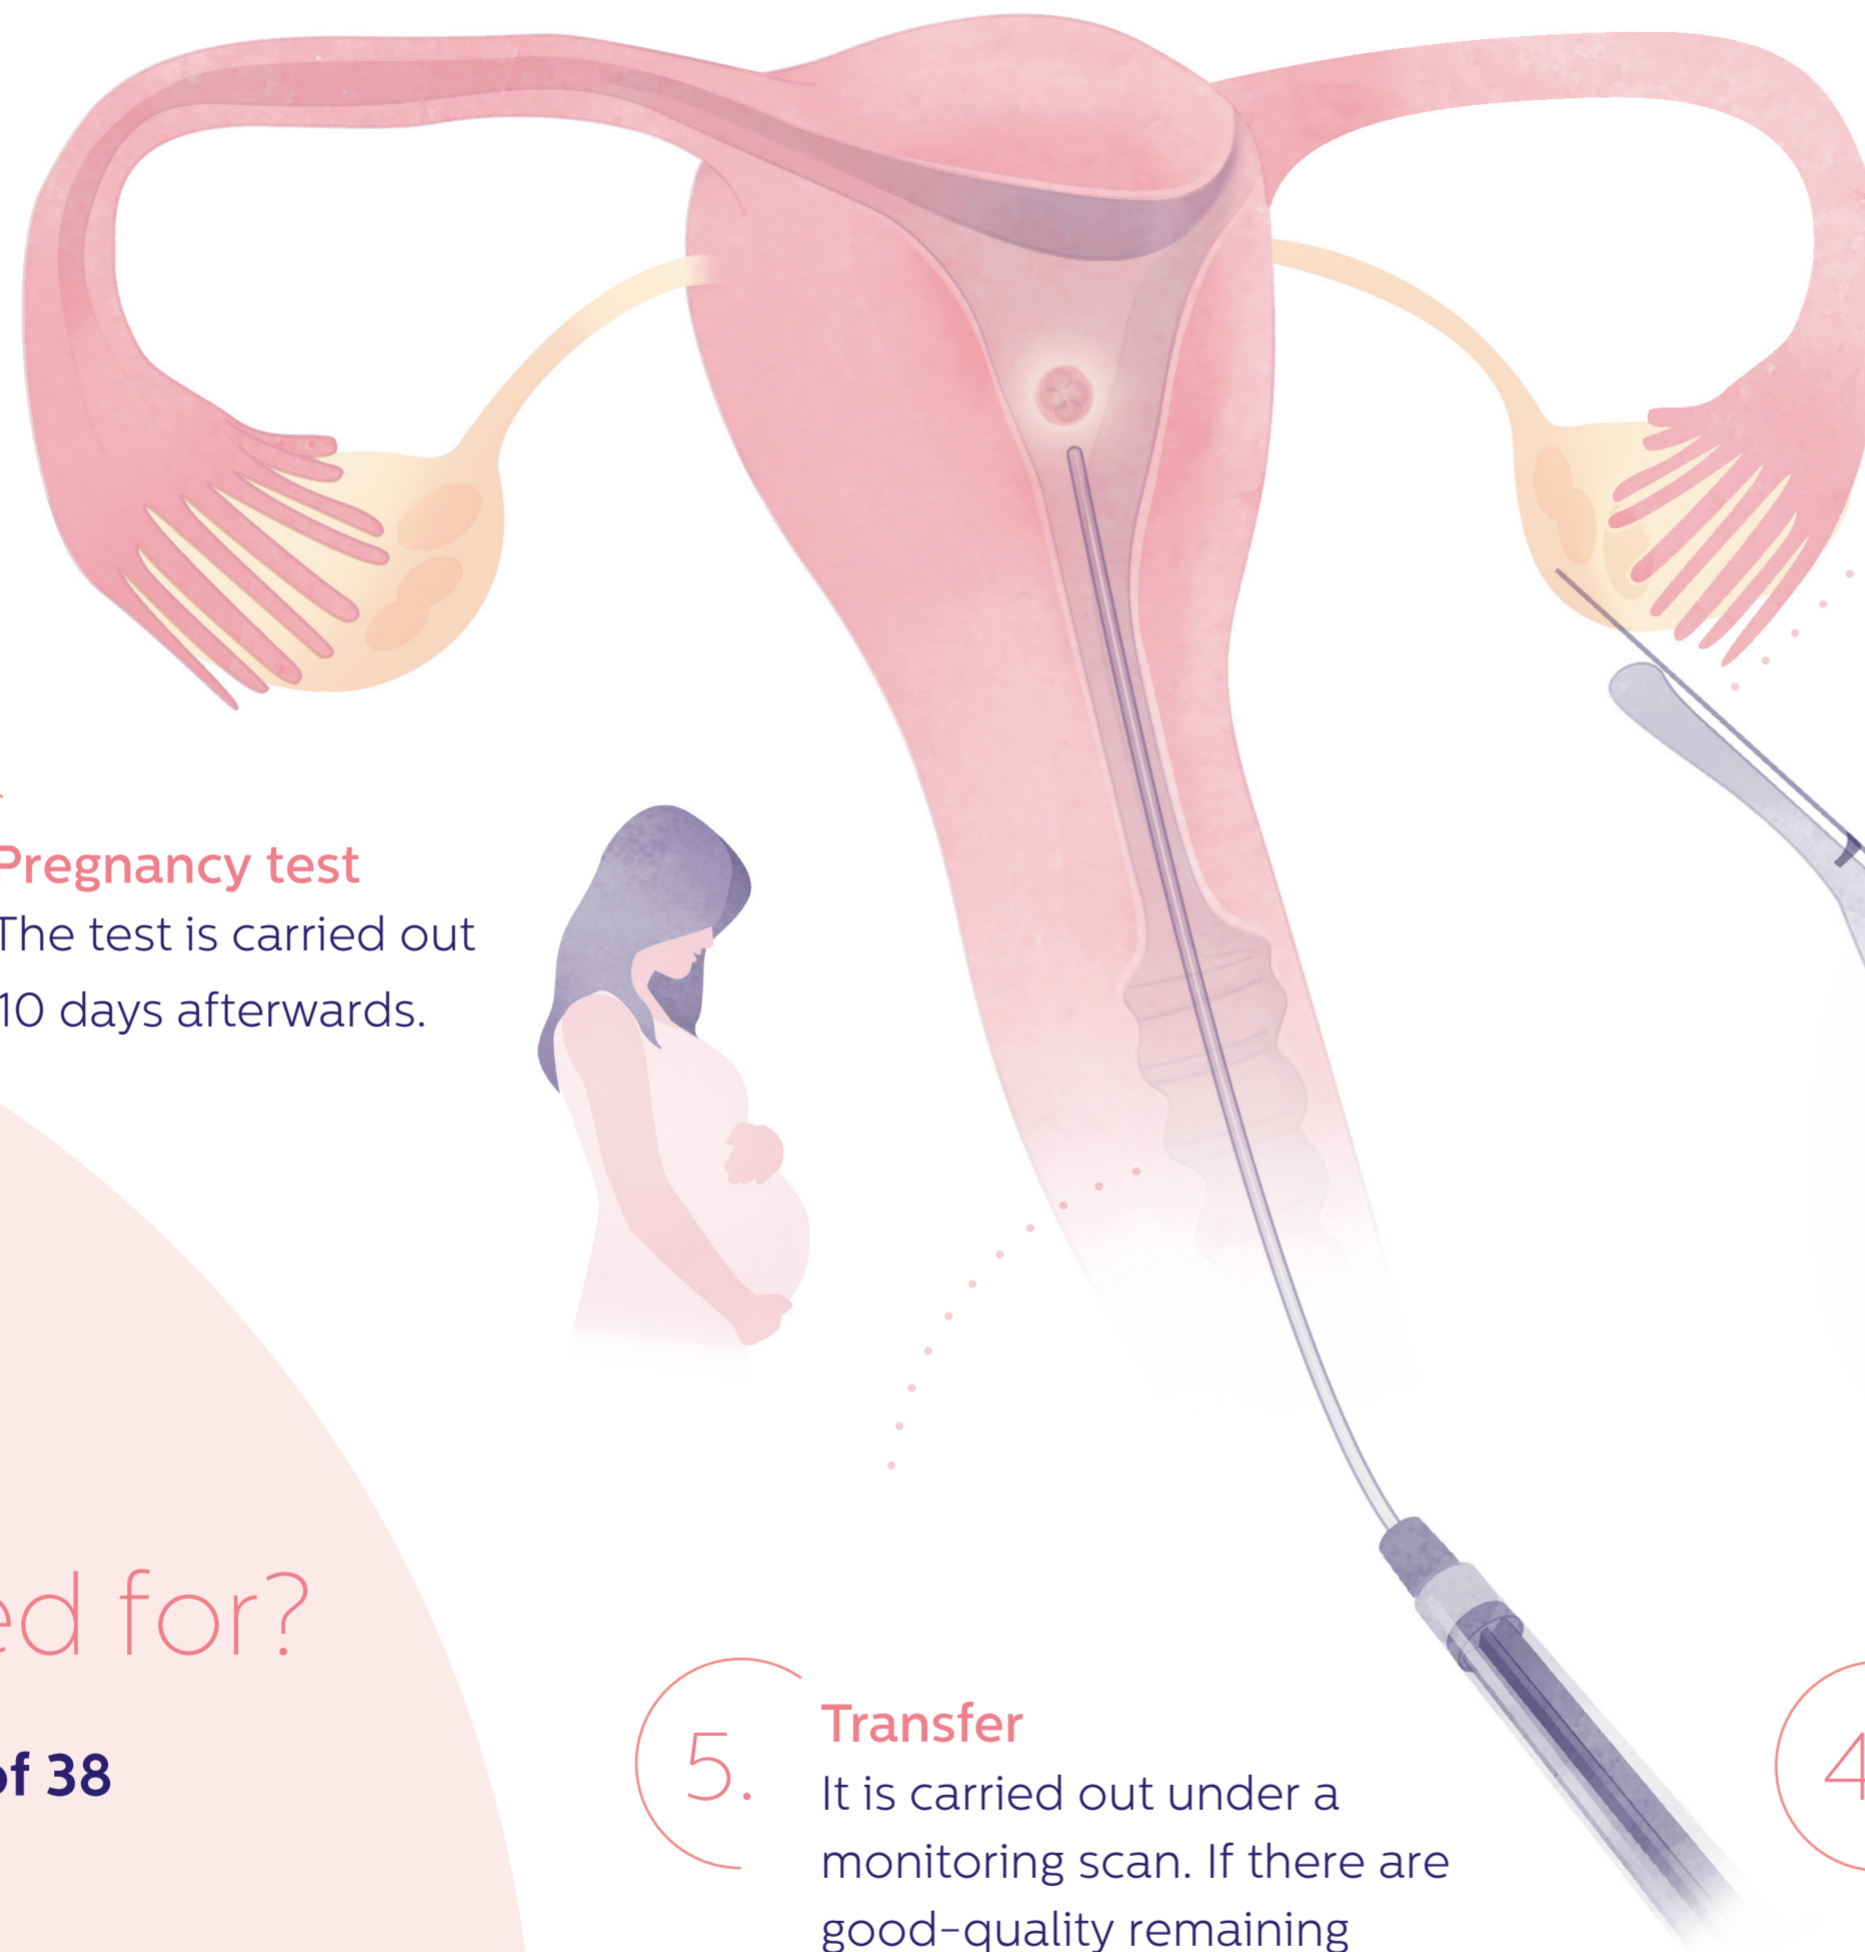

### Transfer

It is carried out under a monitoring scan. If there are good-quality remaining embryos, they are frozen for following transfers.

6.

### Pregnancy test

The test is carried out 10 days afterwards.

## Who is it recommended for?

- **Women under the age of 38**
- **Low ovarian reserve**
- **Endometriosis**
- **Polycystic ovaries**
- **Previous insemination failures**
